

Impaired Humoral and Cellular Immunity after SARS-CoV2 BNT162b2 (Tozinameran) Prime-Boost Vaccination in Kidney Transplant Recipients

Sattler et al.

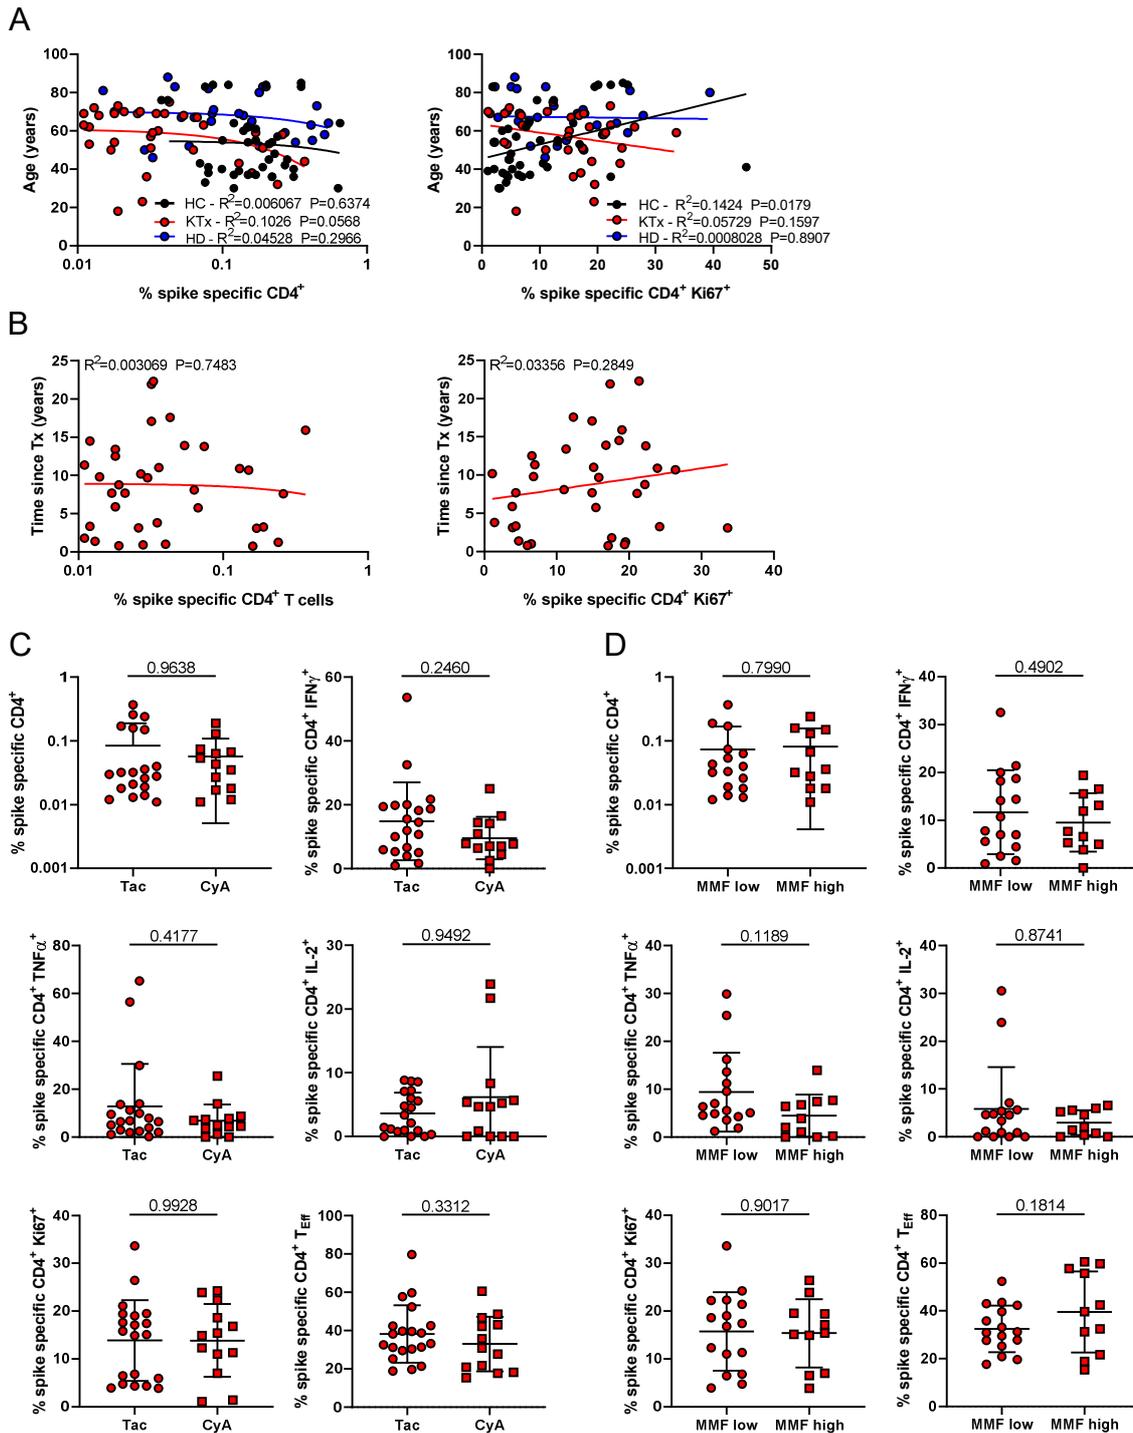

Supplemental Figures 1-5

Supplemental Figure 1, Sattler et al.

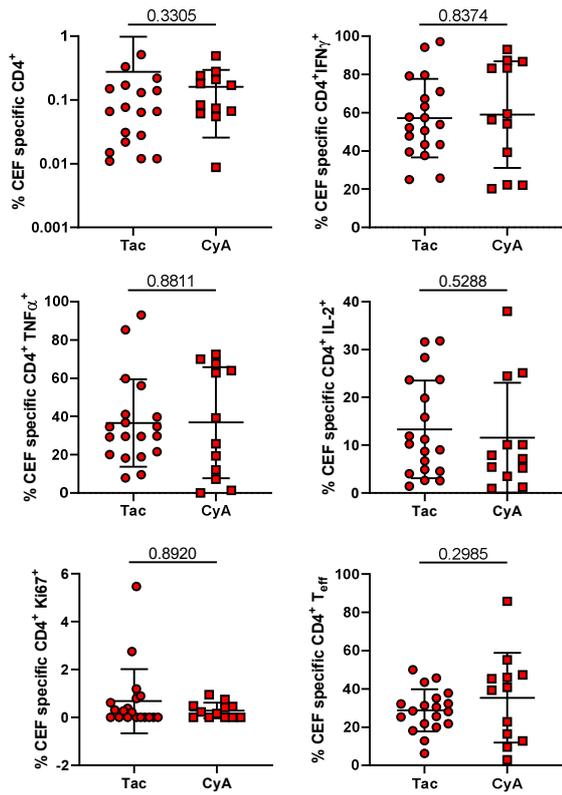

Identification and enrichment of antigen-specific T cells. (A) PBMC were stimulated or not with spike or CEF peptide mix for 16 h as indicated. Antigen-specific CD8⁺ T cells were detected within live single CD14⁺CD19⁺CD3⁺ (dump⁻) lymphocytes according to CD137 and IFN γ co-expression. Live single CD14⁺CD19⁺CD3⁺ specific CD4⁺ Th cells were identified based on co-expression of CD154 and CD137. Specific CD4⁺CD154⁺CD137⁺ Th cells were further analyzed for expression of IFN γ , TNF α , IL-2 and/or IL-4. (B) Exemplary reanalysis dot plots depicting pre-enrichment of spike specific CD4⁺ Th cells via MACS based on activation induced CD154 expression (left), followed by purification via FACS (right). (C) Frequencies of CD4⁺CD154⁺CD137⁺ T cells in unstimulated vs. spike-stimulated samples from responding KTx patients with paired analysis (left) and corresponding stimulation indices (SI) with marks at the defined lower cut-off of 2 for a positive response and at 5 and 200 highlighting the SI range of all but one patient (right); if the percentage in the unstimulated control was 0, the minimum value within the patient cohort was used instead. n as in Fig. 2B.

Supplemental Figure 2, Sattler et al.

Association of the vaccine specific CD4⁺ T cell response with age and IS medication. (A) Age of HC, KTx and HD patients was correlated with frequencies of spike-specific CD4⁺ Th cells (left) or frequencies of proliferating Ki67⁺ cells within the antigen-specific Th cell population (right) with n as in Fig. 2B. (B) Correlation of time since transplantation with frequencies of spike-specific CD4⁺ Th cells (left) or frequencies of proliferating Ki67⁺ cells within the antigen-specific Th cell population (right) in KTx patients with n as in Fig. 2B. (C and D) KTx patients were stratified according to immunosuppressive drug regimen. Frequencies of spike specific Th cells or those expressing IFN γ , TNF α , IL-2, Ki67 or showing a CD45RO⁺CD62L⁻ T_{Erf} phenotype were compared in patients receiving Tacrolimus or Cyclosporine A based (C) or low vs. high MMF therapy (D) (Tac: n=20, CyA: n=13, respectively). Graphs show mean \pm SD.

Supplemental Figure 3, Sattler et al.

Association of CEF-specific CD4⁺ T cell responses with IS medication. KTx patients were stratified according to immunosuppressive drug regimen. Frequencies of CEF specific Th cells or those expressing IFN γ , TNF α , IL-2, Ki67 or showing a CD45RO⁺CD62L⁻ T_{eff} phenotype were compared in patients receiving Tacrolimus or Cyclosporine A based therapy (Tac: n=19, CyA: n=12, respectively). Graphs show mean \pm SD.

Supplemental Figure 4, Sattler et al.

Gene set enrichment analysis result for genes sorted by differential expression p-value and direction of regulation in KTx vs. HC. Enrichments for genes (A) down- or (B) upregulated in KTx vs. healthy individuals are shown. ES: enrichment score, NES: normalized enrichment score, NOM p -val: raw p-value, FDR: false discovery rate, FWER: family-wise error rate.

Supplemental Figure 5, Sattler et al.

Gene set enrichment analysis result for genes sorted by differential expression p-value and direction of regulation in HD vs HC. Enrichments for genes (A) down- or (B) upregulated in HD vs. healthy individuals are shown. ES: enrichment score, NES: normalized enrichment score, NOM p -val: raw p-value, FDR: false discovery rate, FWER: family-wise error rate.
